The ALIVE National Centre for Mental Health Research Translation

Our Focus:	If we:	This will result in:		And lead to:	And contribute to
Prevention across the life course	Implement preventive interventions in community settings to address structural, contextual and individual risk factors.	Increased emotional, social, community capacity for better mental health and well-being	Strengthened environments that protect and promote mental health	Reduction in the risks of mental ill-health across all	Our Vision
Longer, Healthier Lives	Develop tailored models of care that address unmet physical health needs with people living with severe mental ill-health for	Holistic care that brings physical and mental health together	Improved experiences of care, better outlooks and health outcomes	ages	Vibrant communities that support mental health and promote well-being and
Priority Populations	Implement Aboriginal and Torres Strait Islander community-led innovations that change service cultures, improve access,	Improved quality in the workforce to respond to the impacts of social determinants of health	Embedded cultural security, delivery of appropriate care and system responsiveness	Increased service identification, access to services and economic benefits	enable people to thrive
	and reduce stigma and discrimination	Lived-experience informed translational research	Future mental health research leaders across disciplines Lived-experience led	Integrated lived-experience knowledge and	
Lived- Experience	Embed lived-experience in the fabric of research and systems transformation		research and leadership in the mental health research and workforce	expertise in research translation and systems change	Our Mission Transforming mental health and well-being through primary care and community action
Capacity	Grow national networks for capacity building, data	Tailored training, mentorship, career pathways increased capabilities	sectors	systems and nge	
Building	sharing, and support implementation and translation	Implementation of evidence-based models of care and community-led innovations	Reduced duplication in research, data, services and funding Service integration and cost effectiveness	A regenerated mental health ecosystem using co-design	
Mental Health Care At Scale	Co-design a roadmap for national mental health research translation	Centre influence on policy, research implementation with service sectors, funding
